

Resolution

The National Alliance for Public Safety GIS Foundation supports the build-out of a nationwide public safety broadband wireless network and urges members of Congress and the Super Committee to support a bipartisan effort to allocate the D Block to public safety and provide the funding to develop a public-private nationwide public safety broadband wireless network.

This public safety wireless network would provide true nationwide interoperable communications. The network will facilitate the effective visualization of geospatial information at the local, regional, state and national levels simultaneously. The visualization of this geospatial information dramatically enhances effective decision making on a day-to-day basis and during catastrophic events.

Approved: NAPSG Foundation Board of Directors, November 3, 2011
