North Carolina GIS - A Roadmap for State Coordination

Tim Johnson

NC Geographic Information Officer

NC Center for Geographic Information and Analysis

Courage is what it takes to stand up and speak;
courage is also what it takes to sit down and listen.
- Winston Churchill

The Beginning ...

Land Resources Information Service

Created in 1977 with GIS as a core technology to support inventory of land resources for planning purposes

One of the first state government GIS agencies nationally

Eventually became CGIA

Land Records Modernization

Program established in 1977 to develop common standard for parcel mapping in county government and provide technical and financial assistance

Public Records Law

Chapter 132 of NC General Statutes

- Broad right of access to all types of records of public agencies
- Exceptions include confidential or personal records
- May charge for providing access (copies)

Qualified Exception for GIS

- Copies at reasonable cost
- May require "...the copy will not be resold or otherwise used for trade or commercial purposes"

Original Mission

Build statewide GIS database and provide GIS services to other public sector agencies

Enhanced Mission

Provide staff support to collaborative body to maximize value of geospatial and minimize duplication

The North Carolina Geographic Information Coordinating Council (GICC)

NC General Statute
143B 1420-1422

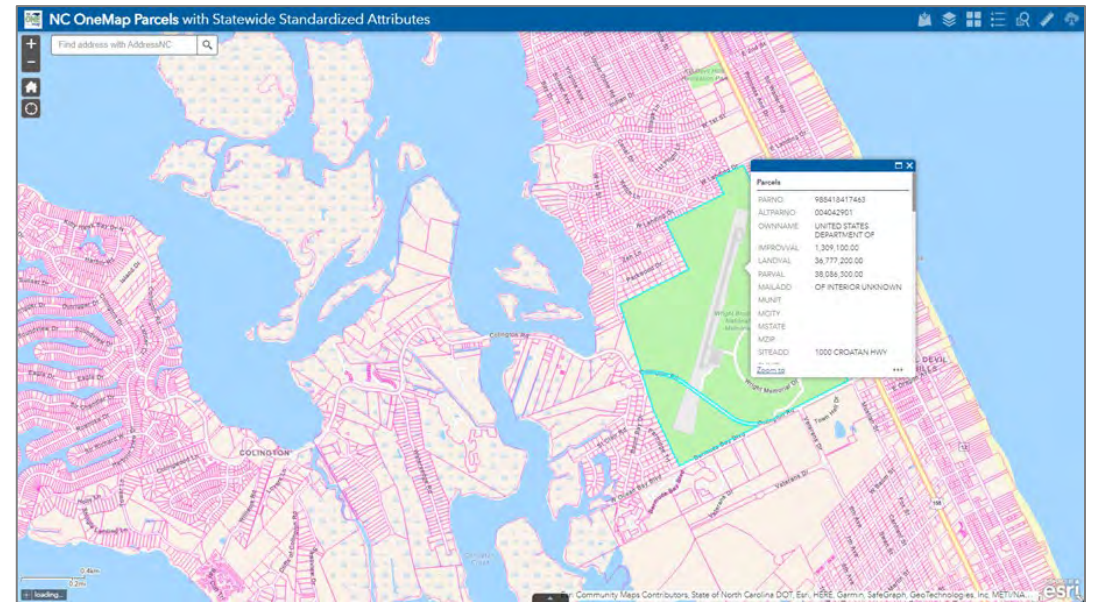

“Data is shared at
the speed of
trust.”

NC OneMap: A Statewide Community

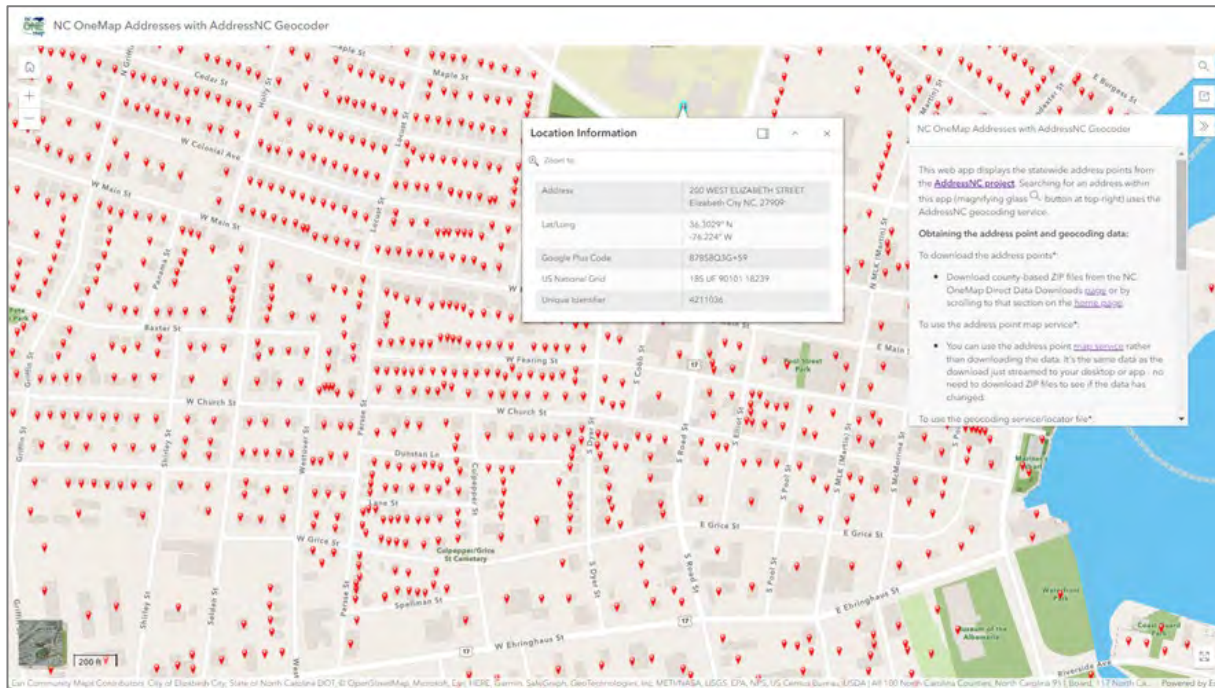

- 20+ years ago NC GICC committed to a vision of:
 - Current, accurate geospatial data
 - Free data discovery and access
 - Data sharing without restriction
 - Data that are reliably maintained, documented through recognized, reliable sources
- Brings together foundational and thematic data from disparate sources into a curated “first-stop shop” for geospatial information
- Data partners cover all levels of government, academia, and private companies

“Seamless” parcels for all 100 NC counties

www.nconemap.gov/pages/parcels

NC OneMap: Varied Uses and Users

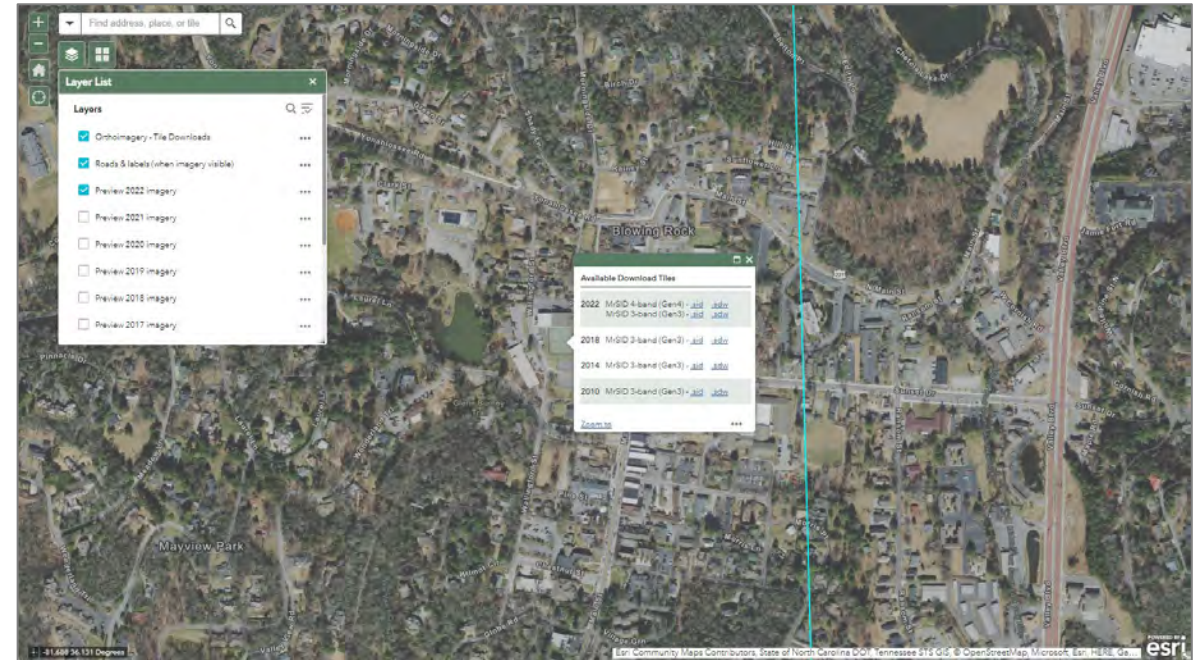

Standardized addresses for all 100 NC counties

www.nconemap.gov/pages/addresses

- Customers range from GIS professionals, to foresters, engineers, teachers, students, realtors, landscapers, planners, and surveyors (you name it!) covering a myriad of use-cases
- Operates under a series of best practices so data are presented in a cohesive, documented manner
- Supports flexible uses of data through web services, downloads, and web apps
- CGIA manages NC OneMap but is also a data contributor

Why Does It Matter?

- Major investments in data acquisition and maintenance (imagery, parcels, addresses, others). Good ROI for NC citizens/GIS community.
- Through geospatial coordination and free, reliable data, NC OneMap provides a critical function that helps:
 - Governments to make better-informed, critical decisions
 - Promote economic vitality in NC communities
 - Promote public safety by protecting North Carolina people and property

6"-pixel imagery for all 100 NC counties since 2010

Standard

State of North Carolina
Department of the Secretary of State

ELAINE F. MARSHALL
SECRETARY OF STATE

Order Adopting North Carolina Orthophotography Standards For Base Mapping

WHEREAS, the Department of the Secretary of State (Department) is required by G.S. §102-17 and §147-54.3 to adopt technical standards and detailed specifications for base mapping to be used to achieve a greater degree of statewide standardization for use in land records, and

WHEREAS, over the past year the Department has worked extensively and cooperatively with stakeholders to produce a set of revised standards for Orthophotography, and

WHEREAS, the North Carolina Geographic Information Coordinating Council has recommended the adoption of the revised standards, and

WHEREAS, I have considered the recommendations of the staff of the Department of the Secretary of State, as well as the recommendation of the North Carolina Geographic Information Coordinating Council,

NOW, THEREFORE, IT IS HEREBY ORDERED AND DECREED that pursuant to the authority granted me by G.S. §102-17 and §147-54.3(c), effective on this date, I hereby adopt the revised Orthophotography Standards for use to achieve a greater degree of statewide standardization of land mapping for use in land records in the State of North Carolina.

A copy of the adopted Orthophotography Standards is posted on the Land Records Management page of the Department's website at <http://www.secretary.state.nc.us/land/ThisPage.aspx> or may be obtained by contacting the Department at:

Land Records Manager

NC Orthoimagery Program Cycle

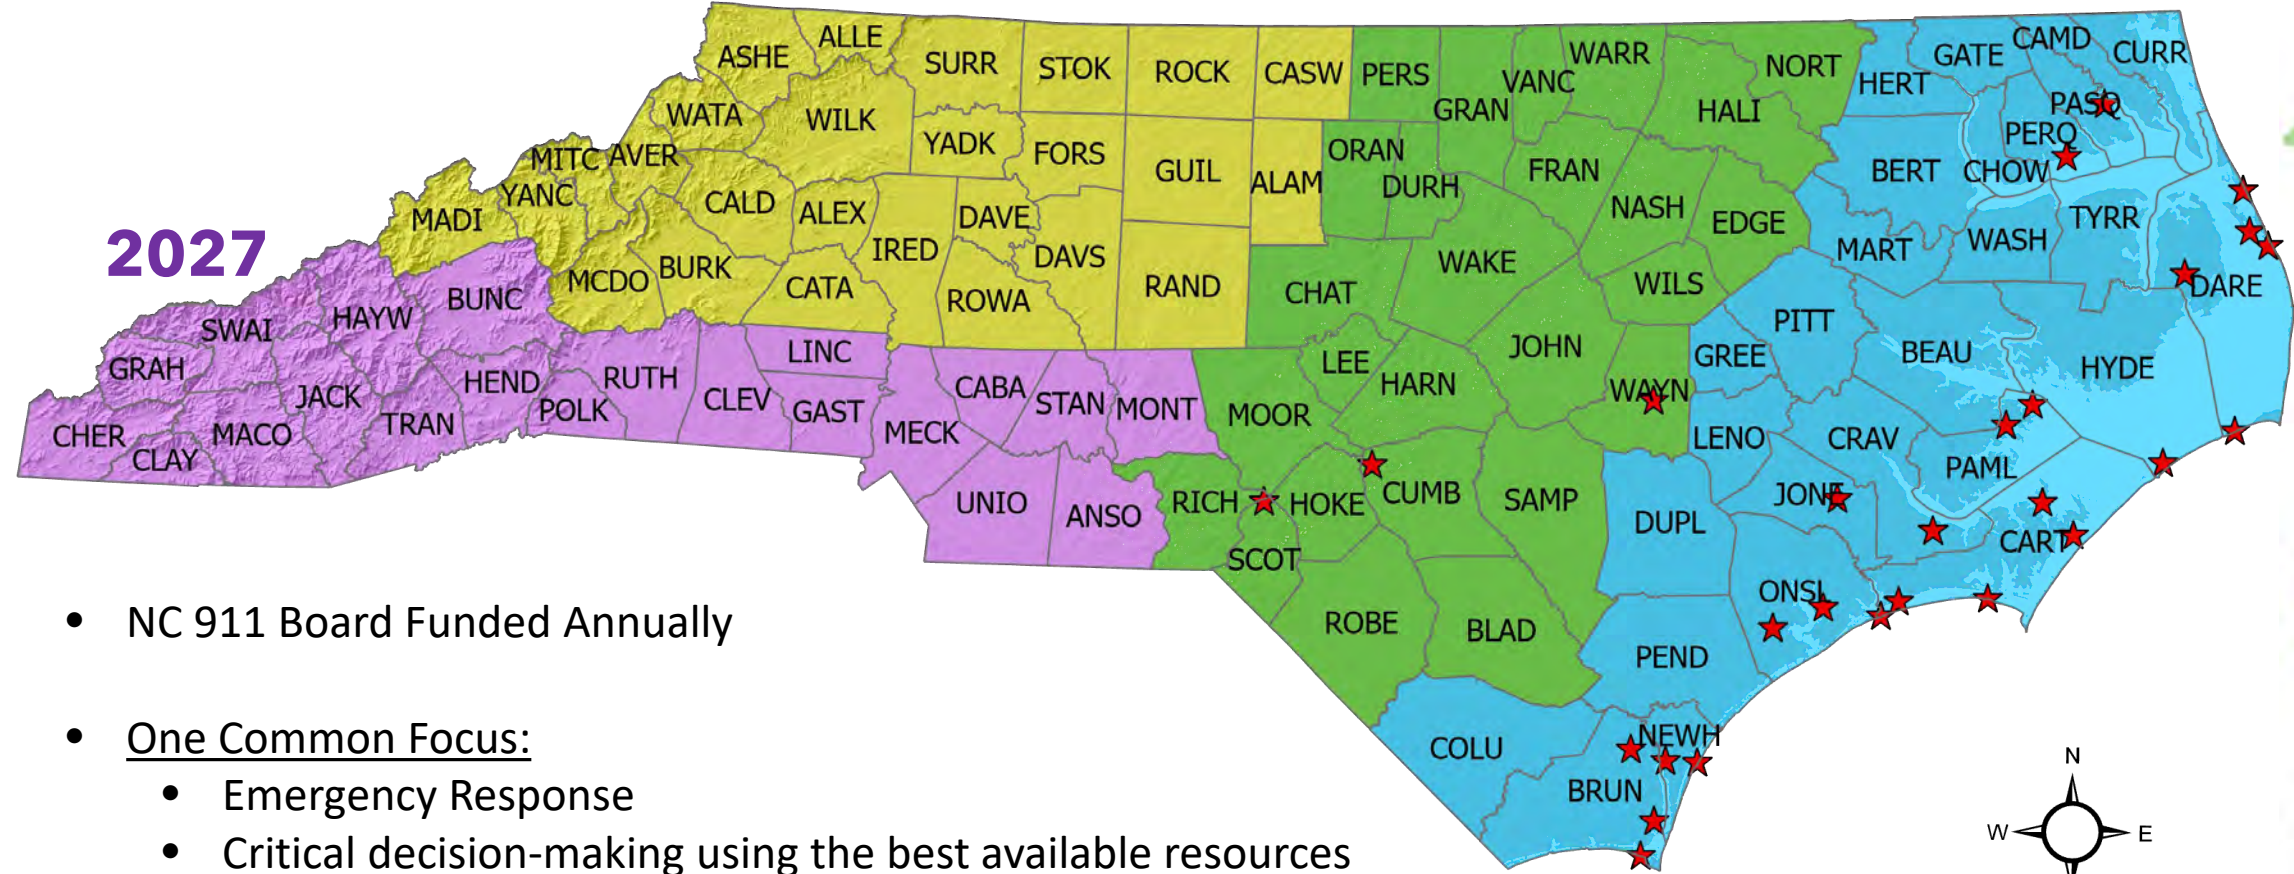

4-Year Cycle

2026

2025

2024

2027

★ Military Installation Locations

- NC 911 Board Funded Annually
- One Common Focus:
 - Emergency Response
 - Critical decision-making using the best available resources
- Proactive approach to create up-to-date, visually consistent imagery product across all 100 counties
- End product free to all citizens of North Carolina

NC True Ortho Approach to Urban Areas

NC OneMap DATA PROJECTS ANNOUNCEMENTS TERMS CONTACT US ABOUT

North Carolina Orthoimagery

Discover and Access Imagery Across the State

Since 2010, the North Carolina 911 Board has funded orthoimagery for North Carolina. Approximately a critical tool for emergency planning and response commonly used by a number of public and private economic development, environmental assessment

<https://www.nconemap.gov/pages/imagery>

Project Status

Zoom into the current project area to see the exact dates that imagery was flown. Future project areas are also outlined.

NC Parcels Workflow

Benefits of NC Parcels Layer

- Counties can access their data on NC OneMap to back up their local data if their system has been compromised
- Emergency preparedness, response, recovery and mitigation
- Transportation planning / landowner notification
- Public health analysis
- Economic development
- Land conservation
- Broadband access and availability

User Stories: Equitable Broadband Access in NC

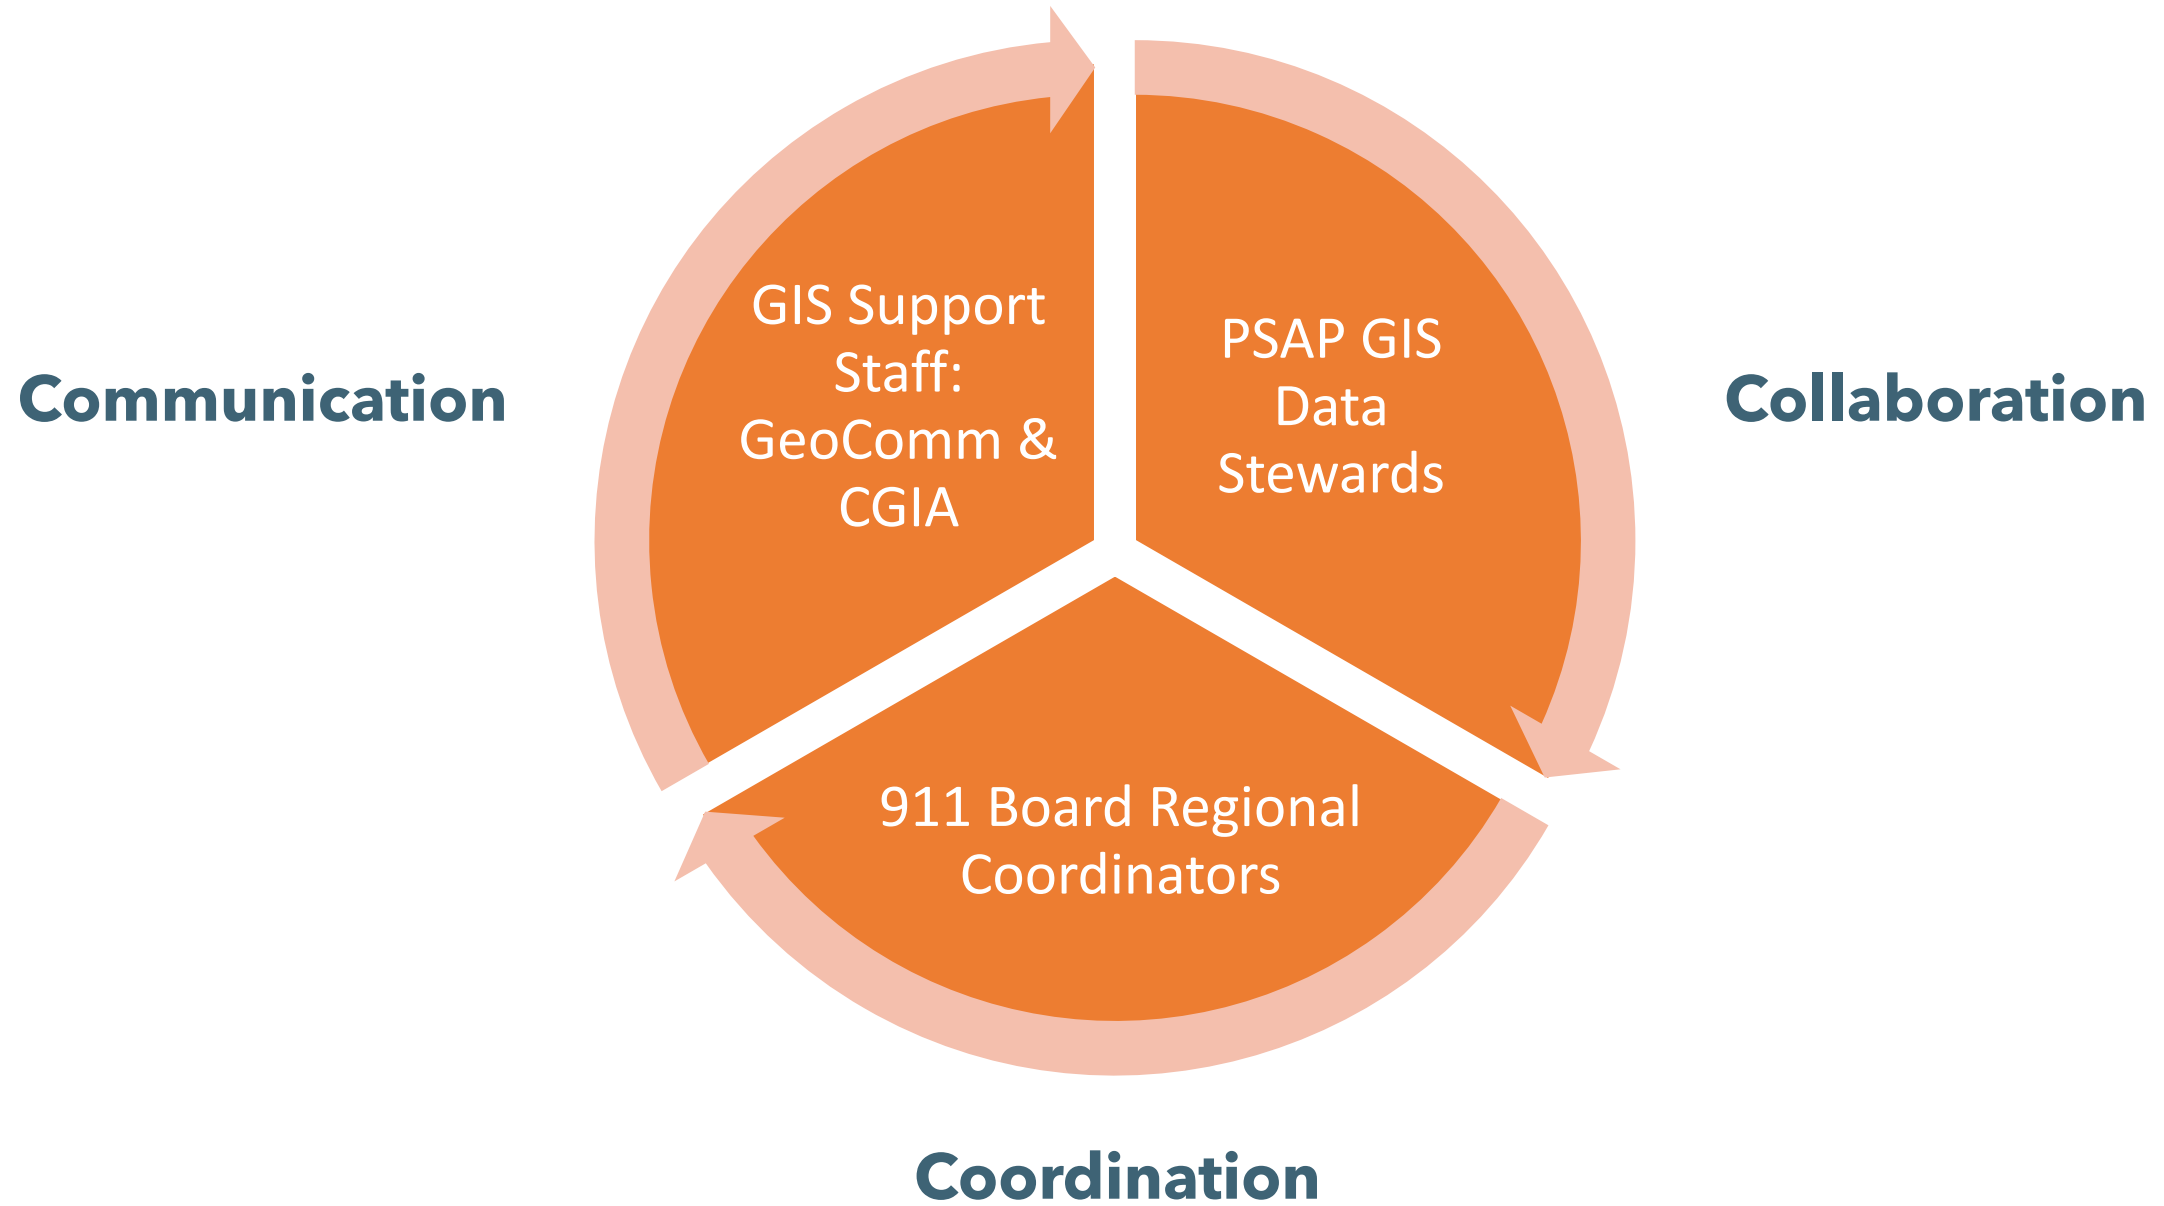

FCC Broadband Fabric Location Challenges

- FCC Broadband Serviceable Locations
- Fabric Challenge Locations

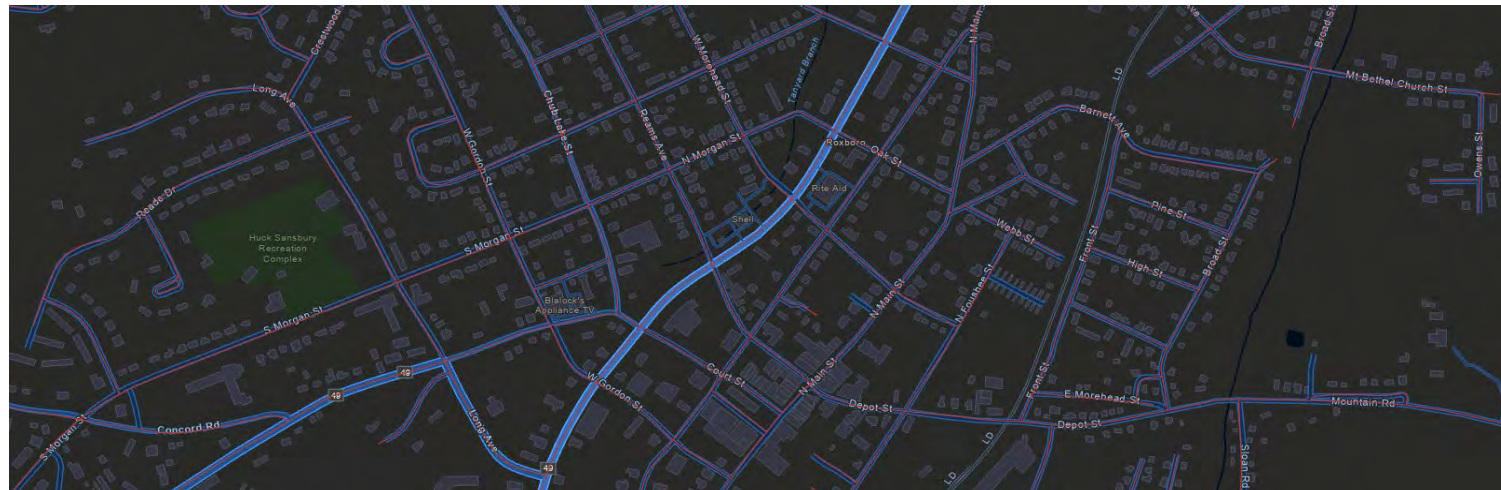

NextGen 911 in North Carolina

NextGen 911 in North Carolina

- Road Centerlines
- Address Points
- Emergency Services Boundaries (Fire, Law, and EMS)
- PSAP Boundary
- Provisioning Boundary
- ALI Database

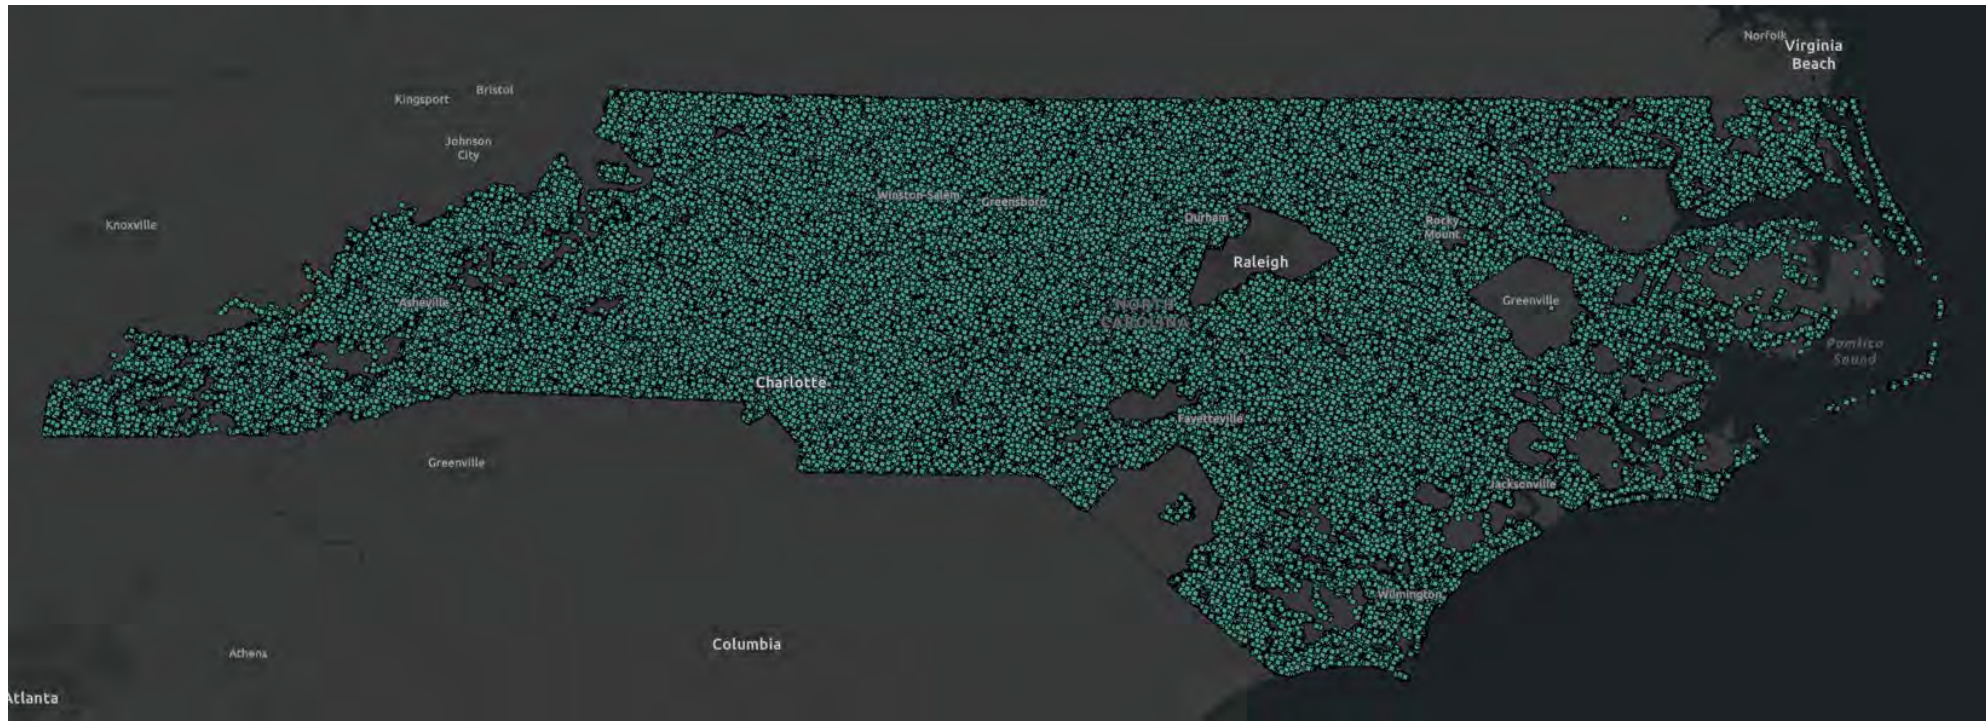

NextGen 911: Road Centerlines

- 873,000+ road centerline segments are currently in the i3 ready database

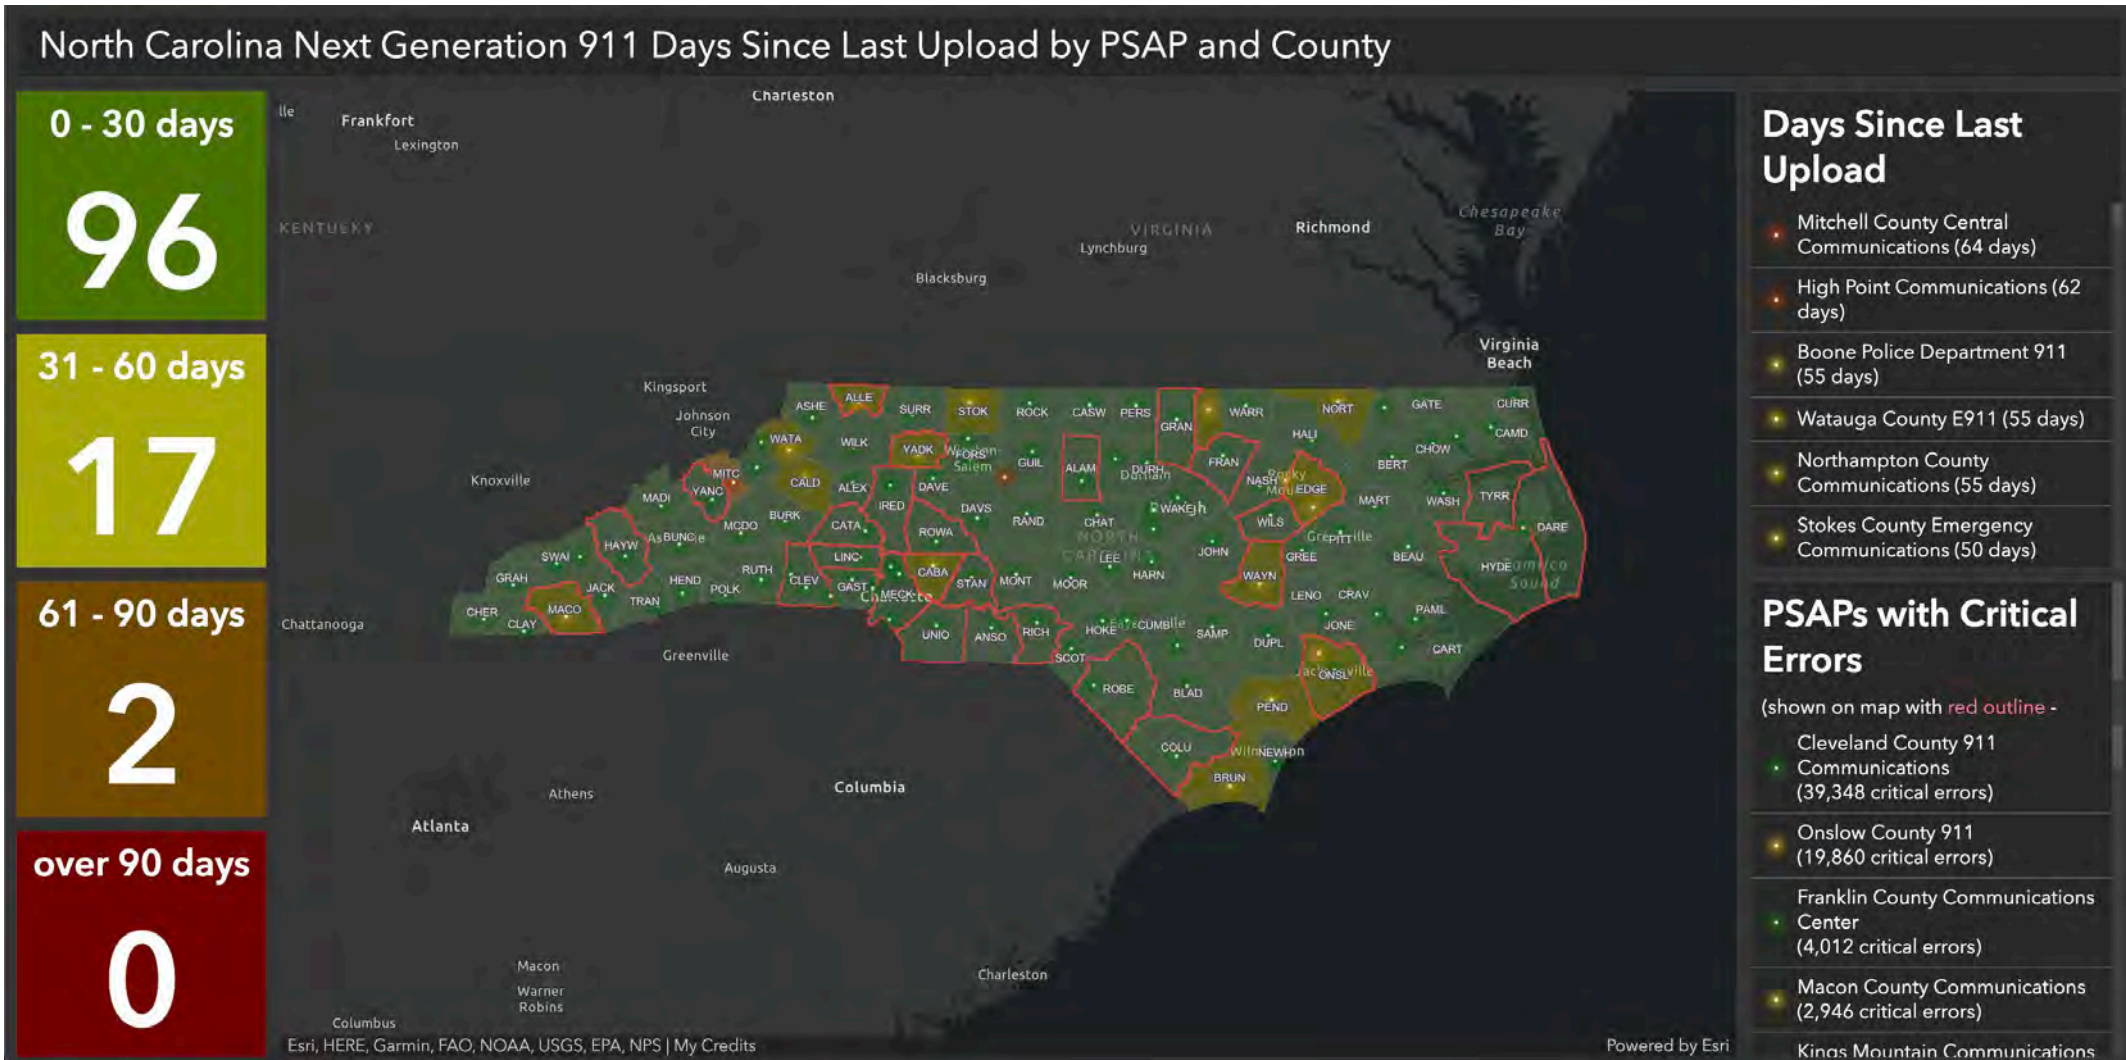

NextGen 911: Address Points

- Over 5.6 million address points are currently in the i3 ready database

NextGen 911 GIS Update Dashboard

<https://nconemap.maps.arcgis.com/apps/dashboards/47592879688f49c39ade923066691b69>

Oversees state building codes

Secures property insurance for state owned buildings

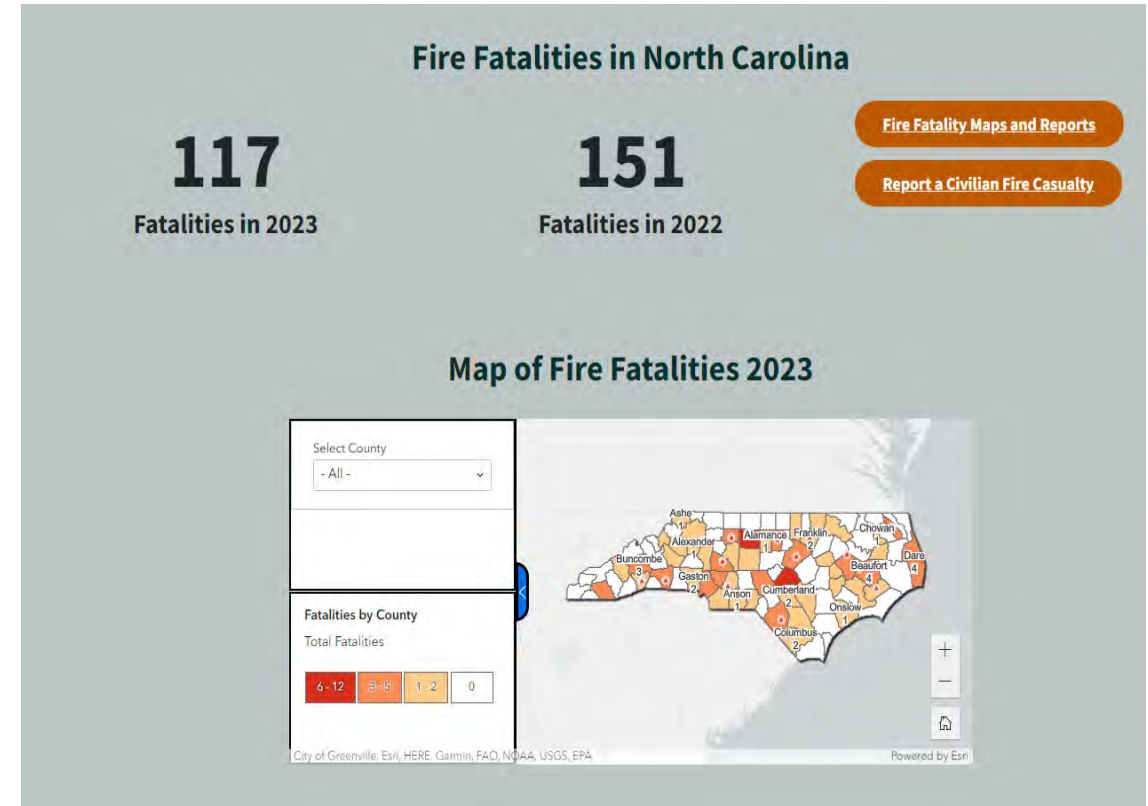

Trains and certifies NC fire and rescue personnel

Community risk reduction

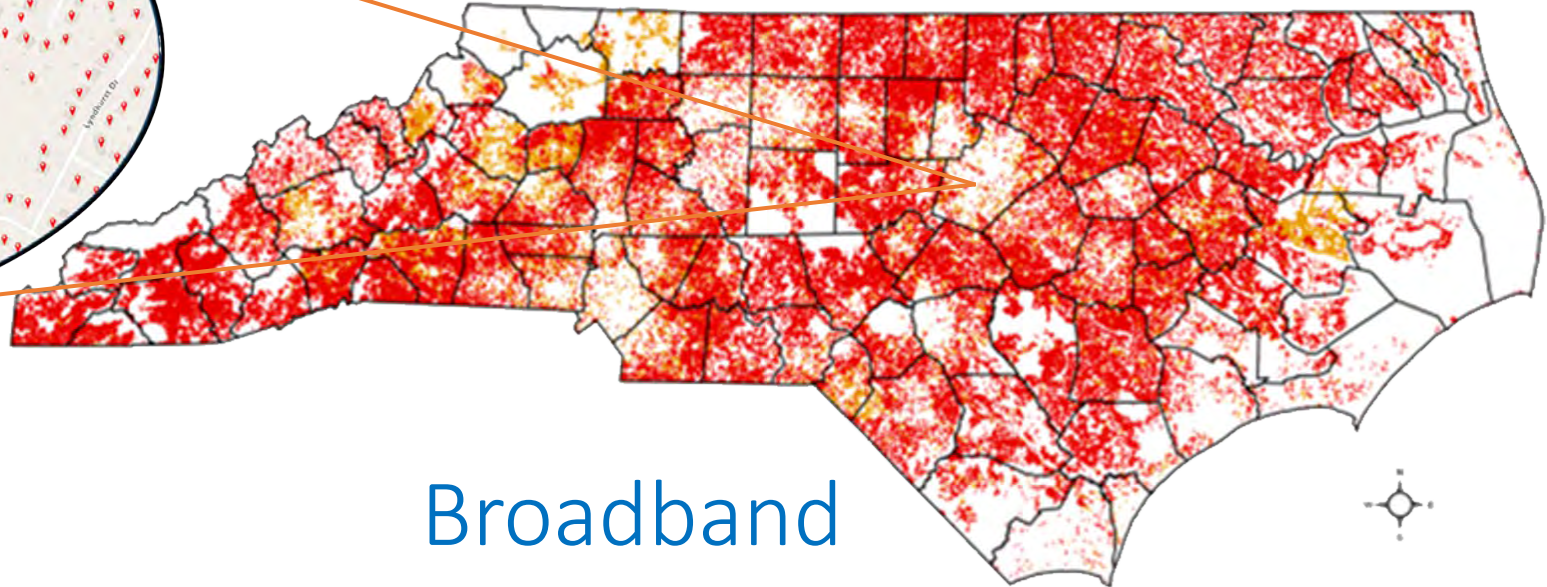

Provides fire department ratings inspections

Tracking Fire Fatalities

- OSFM GIS provides a real time map on the OSFM web page displaying fire fatalities across the state.
- Fatality data collected through the Fire Investigations Unit
- GIS also provides annual reports visualizing the fire death related statistics from the previous year.

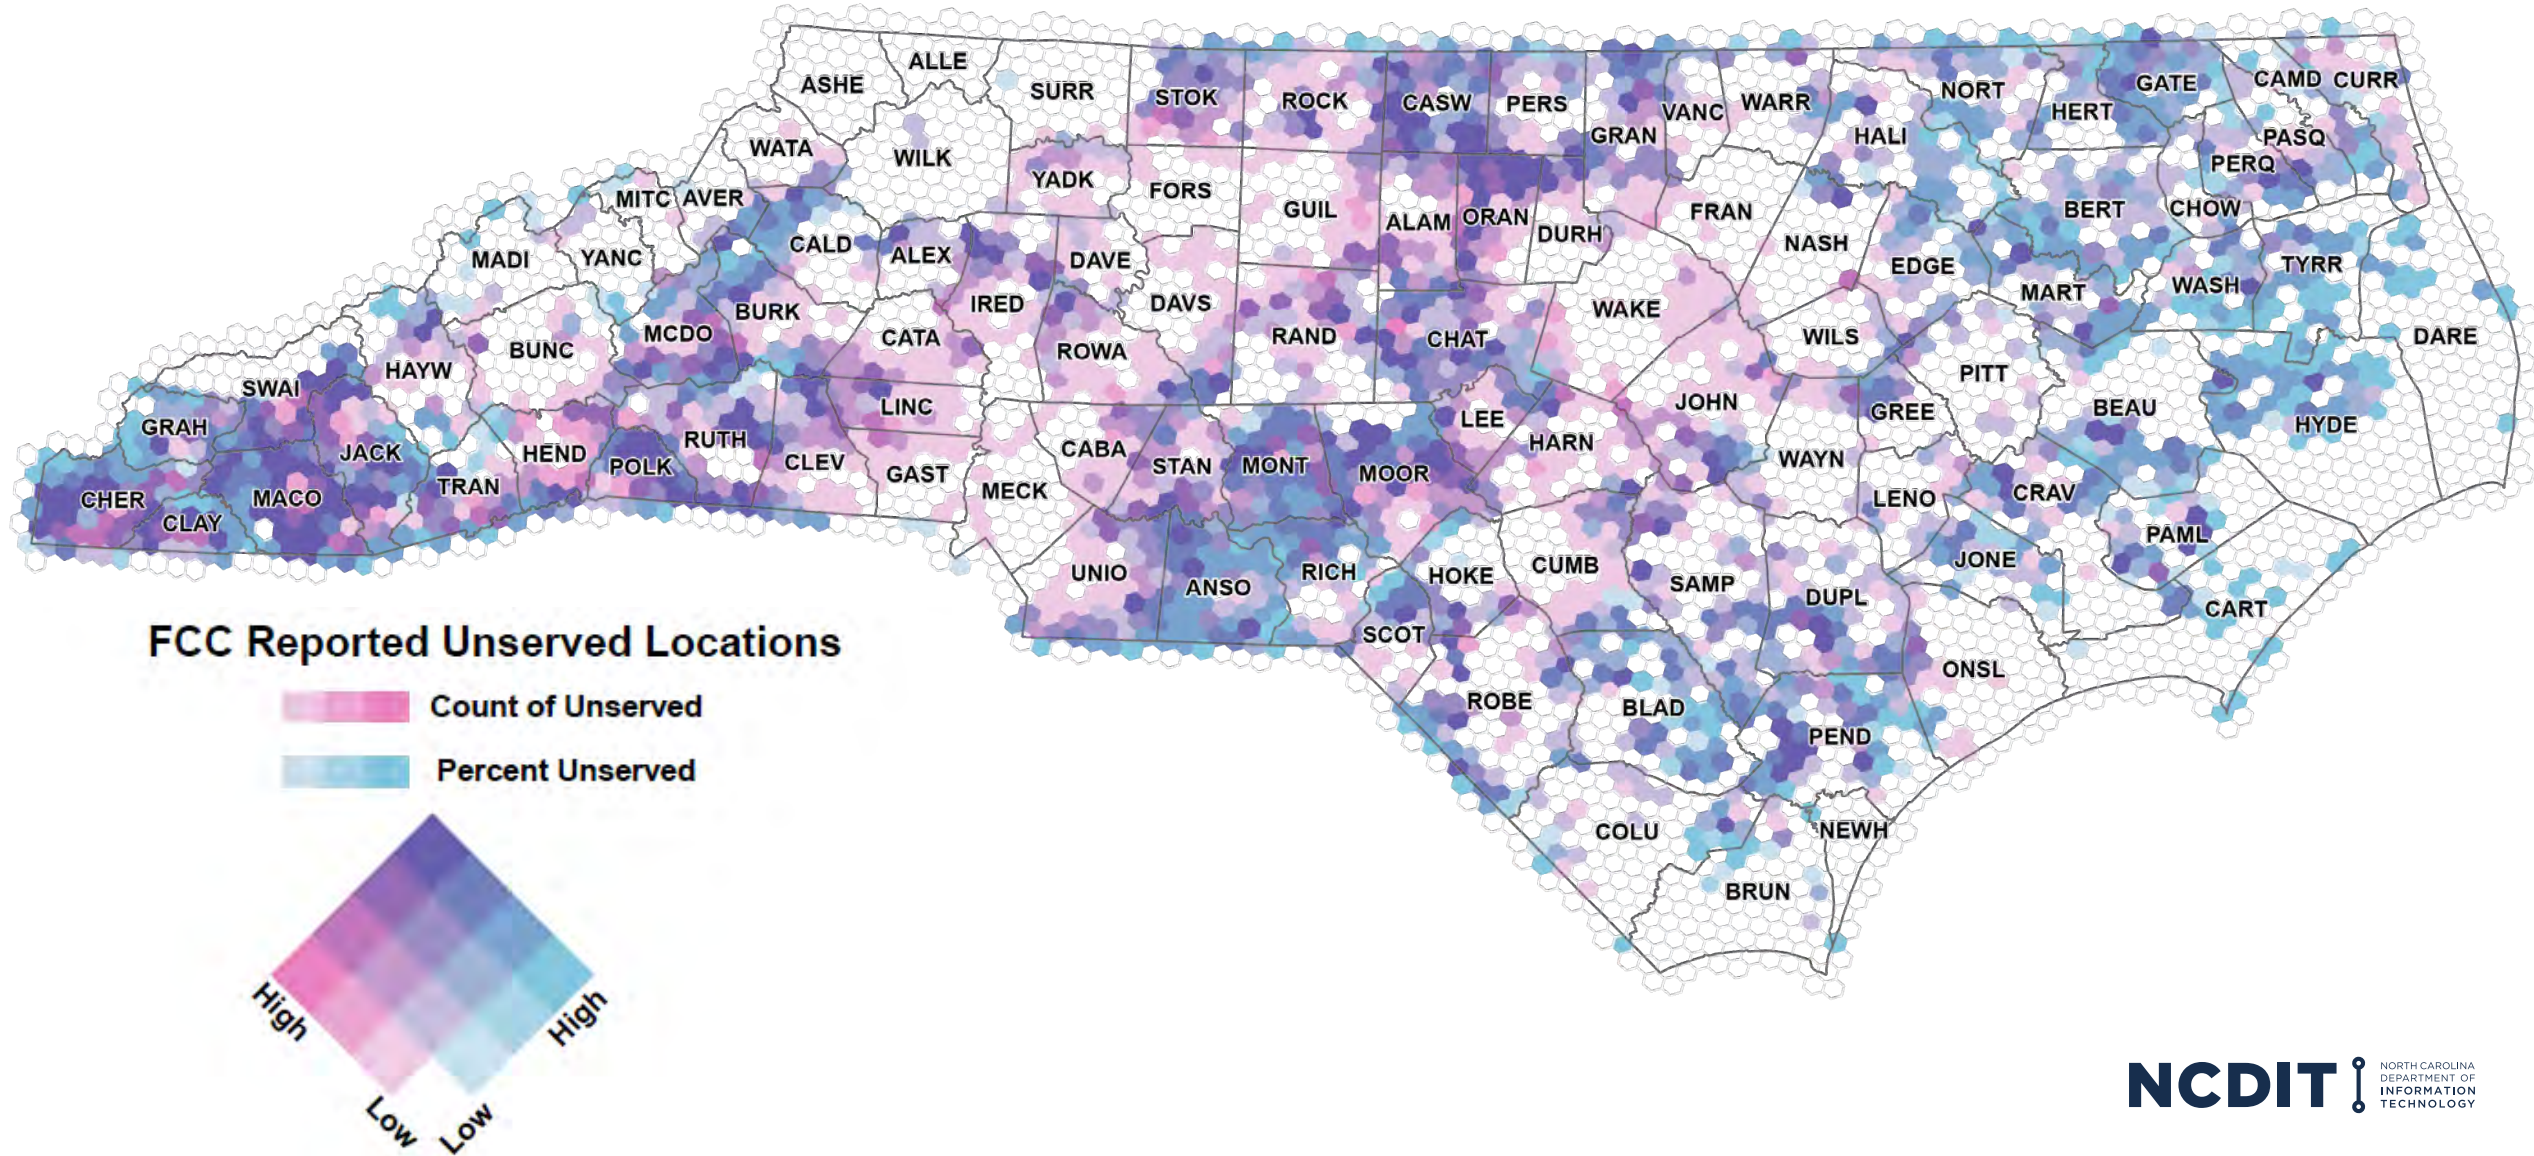

Current Model in North Carolina

Broadband

NC Broadband Profile

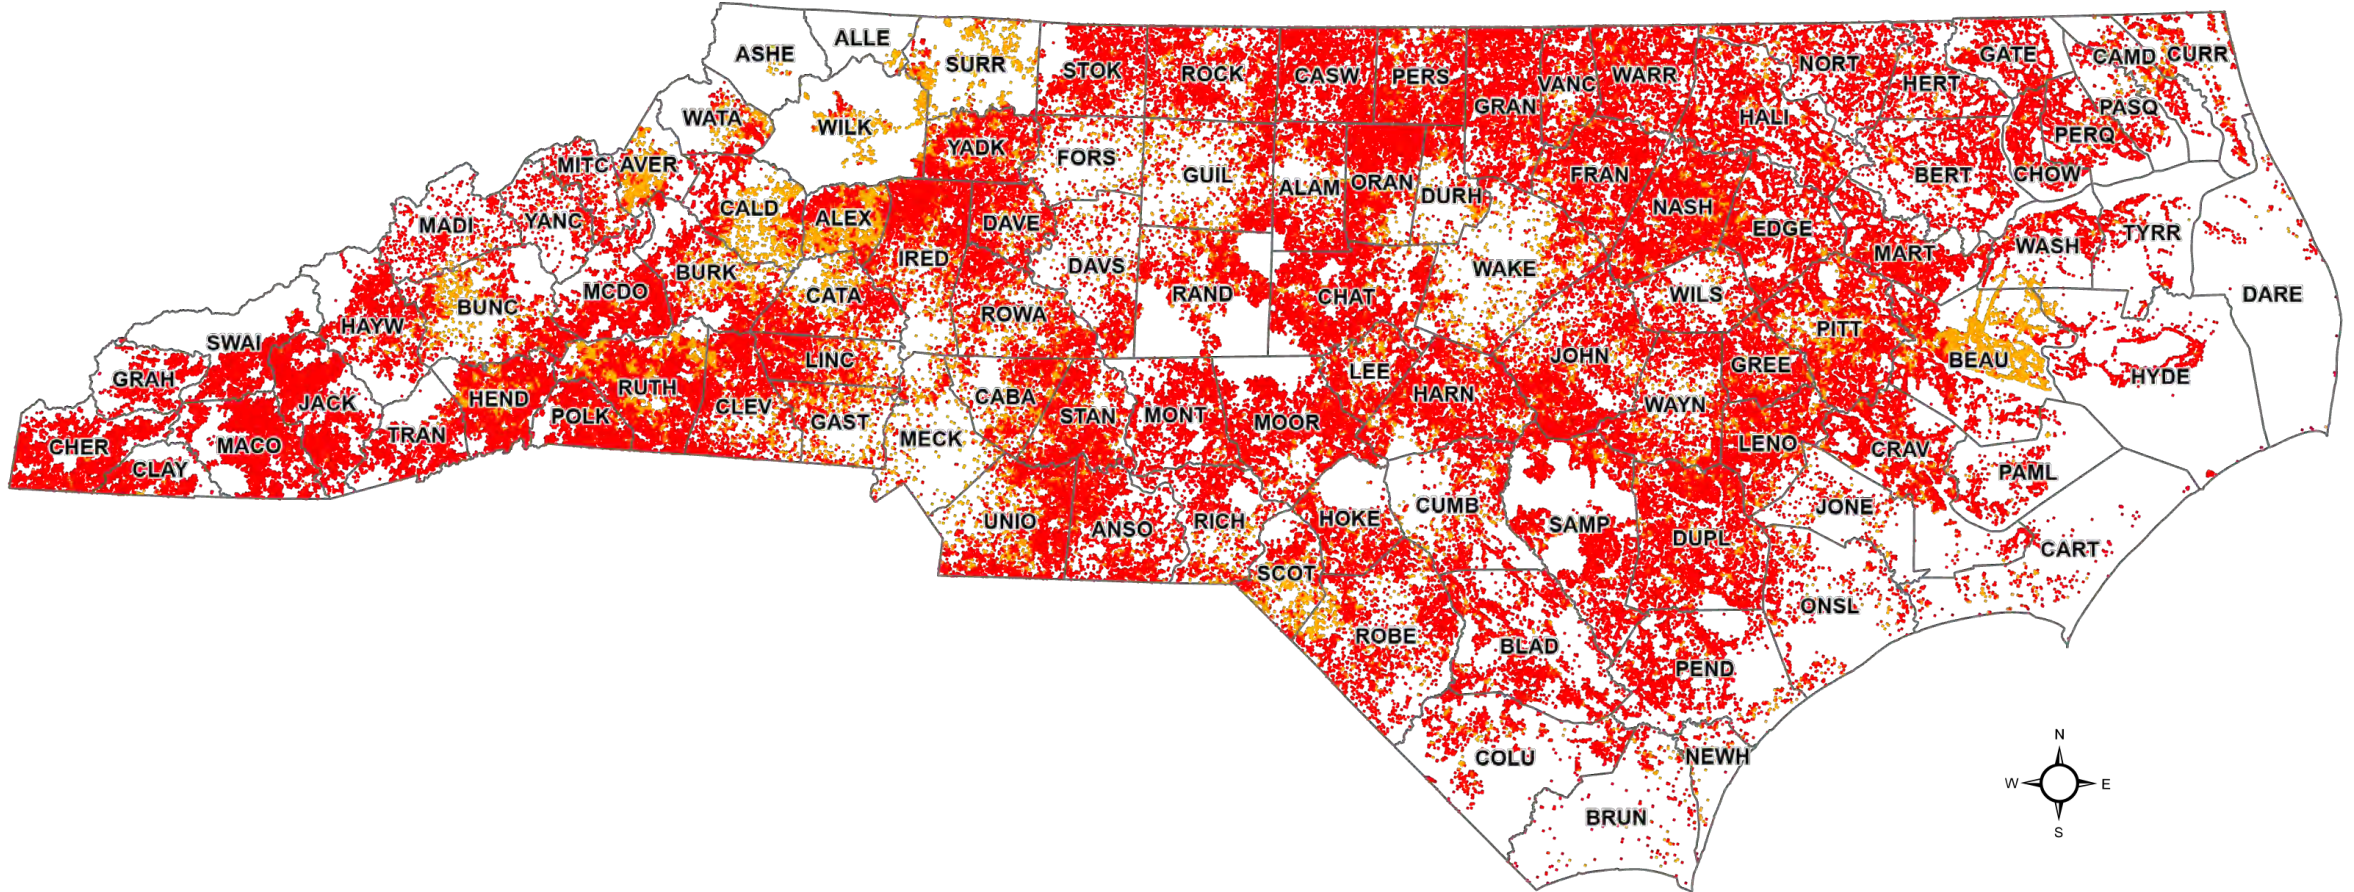

Defining Eligible Project Areas

NC Broadband Profile

Evolving Identification of Unserved Locations

New FCC Broadband Data Collection Serviceable Location Fabric - December 2022

● Unserved Broadband Serviceable Location (Less Than 25mb/s Download and 3mb/s Upload) - 12/31/22
--374,412 Unserved BSLs

● Underserved Broadband Serviceable Location (Less Than 100mb/s Download and 20mb/s Upload) - 12/31/22
--127,956 Underserved BSLs

Statewide Framework Datasets Use Case

Broadband Availability Map Example

- NC Division of Broadband & Digital Equity leverages orthoimagery, addresses, building footprints, and parcels
- Validates location data used by the FCC
- Maps broadband availability data
- Targets grant funding to expand broadband service across the state

AddressNC

Discover and access geographic data related to North Carolina address locations.

Addresses are one of the most essential and necessary datasets in a GIS community and rank in value to parcels, imagery, and roads. North Carolina's authoritative county and local government providers create sustainability, reliability, and confidence for a broad range of address-related applications and use cases.

- ✓ a collaboration with stakeholders from local public safety answering points (PSAPs), local government, counties, federal, and state agencies
- ✓ the most reliable and trusted statewide comprehensive source for precise physical situs
- ✓ an open data platform of nearly 6 million locations streamed through (www.nconemap.gov)
- ✓ Demonstrated integration with large statewide programs
- ✓ A single source unified geocoding platform

Statewide Data Initiatives

Learn how statewide efforts are creating data for a better North Carolina

Imagery for All of NC

Orthoimagery in NC

Funded by the NC911 Board, the NC Orthoimagery Program collects high-resolution orthophotography for a quarter of the state each year. This imagery can be used as a background for maps and visualizations or as a reference to create data such as buildings, roads, or open spaces - virtually anything visible in the image.

[Preview and download](#) the most recent imagery.

High Speed Access

Broadband

Mapping broadband in North Carolina identifies current access and adoption. This allows state and local governments to dedicate resources necessary for economic development, closing the homework gap, and enhancing emergency communications. Accurate mapping ensures that funding is targeted to areas in need.

High-speed internet access for North Carolina.

Standard Attributes

NC Parcels

The NC Parcels project transforms parcel data from all 100 counties and the Eastern Band of the Cherokee Indians into a statewide data set with standardized attributes. Parcels supports a number of key industries such as economic development and emergency management.

[Browse](#) parcels from the mountains to the coast.

911 Response

Next Generation 911

NC DIT and the 911 Board are working to bring NG911 to North Carolina, featuring the ability to send emergency responders directly to the 911 caller's exact location, even if the person is calling or texting with from cell phone. There are multiple benefits to this technology and GIS plays a role.

Learn [more](#) about Next Generation 911.

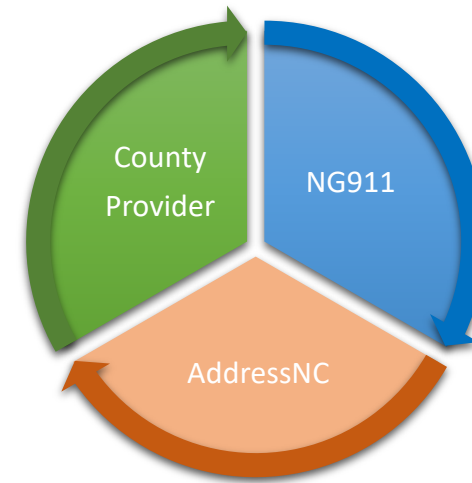

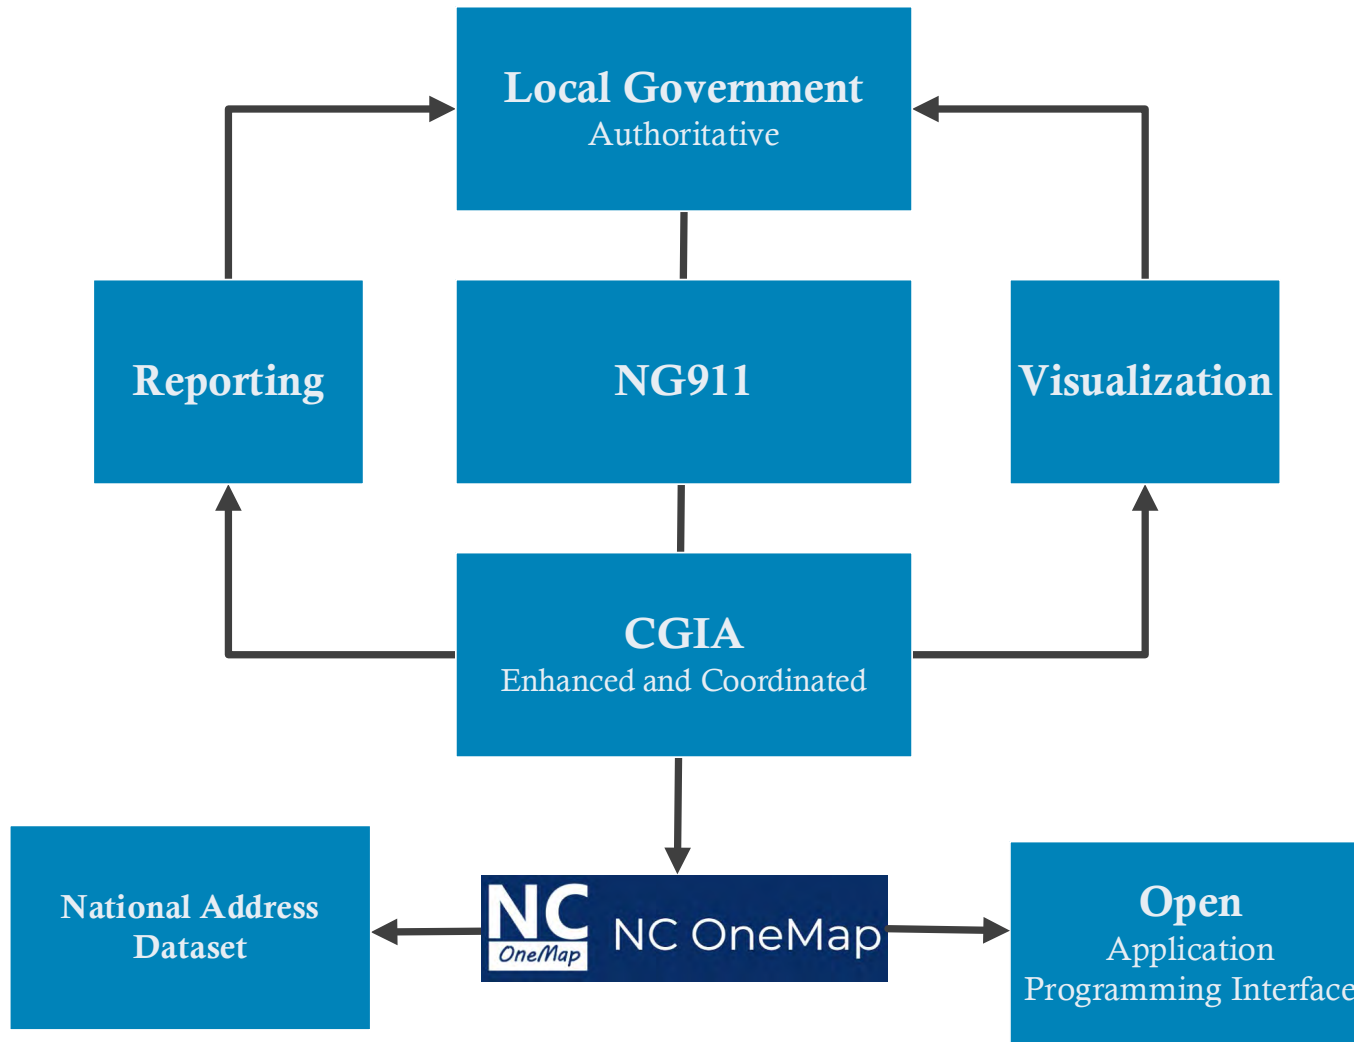

Statewide Geocoding

AddressNC

A standardized addressing solution that completes a full circle flow of information from county and local government providers through Next Generation 911. Address NC integrates and adds value to statewide assets such as parcels, building footprints, and municipal boundaries.

[Browse](#) addresses from top to bottom.

✓ Sustainable

✓ Trusted

✓ Reliable

Building Footprints

Why Are Building
Footprints a GICC
Priority?

Building Footprints : GICC Priority and Benefits

Stakeholders

- ❖ Emergency Management
 - ❖ N.C. Floodplain Mapping Program
 - ❖ Office of Recovery and Resiliency
- ❖ Board of Elections
- ❖ Broadband Office
- ❖ Department of Transportation
- ❖ Municipal Governments
- ❖ County Governments

Benefits

- ❖ More accurate risk assessment
- ❖ Enhanced emergency response
- ❖ Recovery assistance and resiliency planning
- ❖ Broadband expansion
- ❖ Election confidence and voter information

Orthoimagery Value Added Derived Products

Building Footprints Example

- NC GICC Working Group for Building Footprints
- Business Plan to annually update buildings from NC Orthoimagery projects
- Artificial Intelligence – Machine Learning in AWS Cloud Environment for automated extraction of building footprints from imagery products

The Road Ahead

Implement statewide high-resolution hydrography

Solve infrastructure data accessibility

Impact statewide policymaking where geospatial is key

Explore AI tools and techniques to further enhance GIS efforts

Contribute to the future NSDI ecosystem
